Introduction

Pros

- Effective at maintaining social distancing during COVID-19 pandemic
- Generally well-received by clinicians and patients as a unique mode of connecting

Cons

- Digital literacy and broad-band access are a concern for certain demographics
- Compensation gap between telemedicine and in-person visits

Introduction

Pros

- Effective at maintaining social distancing during COVID-19 pandemic
- Generally well-received by clinicians and patients as a unique mode of connecting

Cons

- Compensation gap between telemedicine and in-person visits

Video-based

Digital literacy and broad-band access are a concern for certain demographics

Phone-based

Lack of payment parity and perceived lack of quality care

Methodology

Study and Sample

Longitudinal cohort of primary care clinicians (n = 113) representing various disciplines, practice settings, and geographic locations

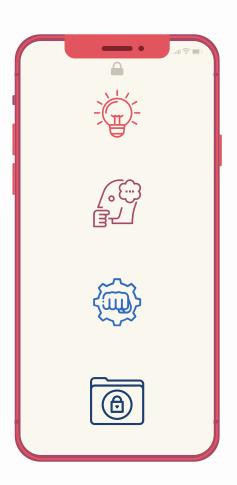

16 Total Surveys

Surveys administered in 2 cycles (8 surveys/cycle) from March 2021 to November 2021

*Our study utilizes responses from Cycle 2 (September to November 2021), where questions differentiate between video and phone-based telemedicine

Questions

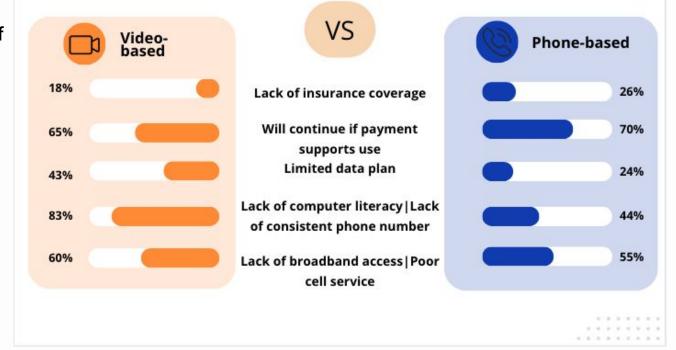

Examined clinician's experiences with telemedicine and its perceived effectiveness in reducing inequities

Fig. 2. A closer look on loss to follow-up, "falling through the cracks," and health inequity

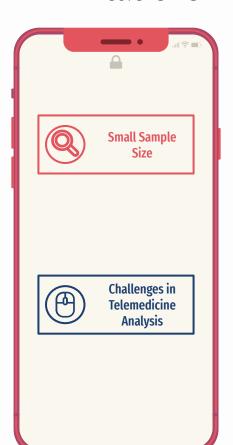

Introduction Methods Results Conclusion

Limitations

Sample Size

 Limited participants affected statistical analysis of variables

Challenges in Telemedicine Analysis

- Current literature lacks differentiation between video-based and phone-based telemedicine.
- Varying access levels to video versus phone-based care must be acknowledged.

Conclusions

More research!

Delineate between video-based and phone-based telemedicine

Cost implications of telemedicine use

Patient perspective

Quality of care and the role of telemedicine in addressing health inequities

Improve privacy within phone telemedicine

Privacy is a major concern for continued used of telemedicine

Payment parity

Encourage increased use of phone-based telemedicine and improve accessibility for patients

Thank you!
